

XLeap Center

Superior decision-making at speed

XLeap provides tools and spaces which support all stages of informed decision making such as: discovery of facts and opinions for situational awareness, prioritization, creative problem solving, deep-dives, multi-criteria (utility) analysis.

Participants join from wherever they are when their knowledge or consent is required.

When a true view of the facts or the possibilities is more important than who said it, XLeap cuts through the politics by providing anonymity. Participants 'say' what they think and judge contributions on merit alone.

Simultaneous input involves participants in fast and intensive exchanges not possible by traditional means. This unlocks 'tacit' information that usually does not surface or only when it's too late.

XLeap takes decision-making to an entirely new level. Documentation in Word or export to Excel is instant.

Agility and responsiveness at all levels

Top-level decisions often remain just that simply because the organization is incapable of implementation at speed.

With XLeap, organizations enable the translation of executive decisions into action by enhancing their decision-making capability at all levels.

XLeap scales to this task and accelerates adoption through session templates.

Enterprise-class cloud deployment

An XLeap Center provides enterprise-class scalability and security as a software service. It offers

- a custom URL, such as *example.xleap.net*
- the scalability of a dedicated web application
- SSO (SAML2.0)
- a dedicated database on an encrypted volume
- encrypted, instantly restorable backup

An XLeap Center can be deployed rapidly by our specialist administrators in the appropriate AWS data center (Dublin, Frankfurt, London, Singapore or Virginia).

Amazon Web Services is one of the most comprehensive, highly available and secure data services available today.

Administrative control

Management of the XLeap application 'from within' falls to your administrators. Center administration includes

- enterprise class security controls
- reallocation of Host licenses to reflect changes in roles and personnel
- administrative branding of login page, welcome space and report logo
- easy roll-out across the organization - just add Host subscriptions

Subscription scheme

You require a subscription for the XLeap Center and as many Host licenses as initially required. Licenses are personal. They cover an unlimited number of sessions with as many participants as desired.

Terms run from 1 year to 5 years.
