

Portable Server

Superior decision support on the go

XLeap provides tools and spaces which support all stages of informed decision making such as: discovery of facts and opinions for situational awareness, prioritization, creative problem solving, deep-dives, multi-criteria (utility) analysis.

XLeap cuts through the politics by providing anonymity.

Simultaneous input involves participants in fast and intensive exchanges not possible by traditional means. This unlocks ‘tacit’ information that usually does not surface or only when it’s too late.

Where the Internet cannot be relied on, the Portable Server lets you bring the required capability with you.

Sessions are usually prepared online on a regular ‘networked’ XLeap Center, then uploaded to the Portable Server and vice versa, for instance, to continue work online after the face-2-face session.

Easy handling

The Portable Server is made for non-technical people. Power up and connect a wireless access point to the Ethernet port. Log in with your browser and run your session. The built-in DHCP server provides IP addresses for up to 239 participant computers. Add routers if 239 computers are not enough. It’s that easy.

The Portable Server box packs the latest Intel technology into an ultra-small, dustproof, industrial grade, fanless aluminum chassis. Configuration and maintenance occur through the browser.

Subscription Model

You buy the server box when you purchase a subscription for the server software and at least one host. On Portable Servers, host subscriptions come with a defined number of concurrent participants: 25, 50, 100, 200 or over 200 and are not tied to a named individual. Which means that, if you allow it, anyone in your team can use the server.

CPU	Intel Core i5-7300U, 2.60 Ghz
RAM	8GB DDR3 2666
Solid State Drive	SSD 128 GB M.2 SATA
Ethernet	Intel I219LM GbE, 1GB
Power adapter	DC 19V, 65W, 100-240V
Dimensions / Weight	5.6" x 2.4" x 4.2" (142 x 62 x 107mm) 2.43lb (1.1kg)
